Water Resources

North Area Water Main Replacement, Section 2

Sierra Army Depot (SIAD) Potable Water Well

Peachtree Creek Relief Storage & Pump Station

The EDT team understands the importance of water management and is dedicated to delivering long-term sustainability of our water resources.

Engineering Design Technologies (EDT) Water Resources & Wastewater Services are directed towards ensuring the long-term sustainability of our water resources for generations to come. It is essential to recognize that whether water is in a stream, a lake, drinking water pipe, storm sewer, sanitary sewer or over land as sheet flow, it is part of our total water resource and needs to be managed in a sustainable manner.

EDT has been providing water resources services for more than 20 years for government and private clients. Our services include research; planning; design; and program and construction management for water and wastewater treatment plants, water distribution systems, wastewater collection and transmission systems and stormwater conveyance and control systems.
